COMMONWEALTH OF PENNSYLVANIA

SEVENTH ANNUAL STATISTICAL REPORT

of the

Department of Welfare

E. ARTHUR SWEENY
Secretary

1941

Bulletin No. 84 Penal Section B

-10

Digitized by the Internet Archive

In reviewing this, as well as the three previous statistical reports for the years 1940-1941, comparisons have proved rather interesting.

A recapitulation of the new commitments to the State-owned Penal institutions for the past 4 years reads as follows:

1937-38	2342
38-39	2483
39-40	2330
40-41	2374

Obviously, there has been little change in the total new commitments to the institutions. But when the commitments are analyzed further, there is a significant factor involved.

The following short table will throw some light on the age problem:

PERCENT OF ADMISSION BY AGE

	Below 21	21-24	Below 25
1937-38	38%	23%	61%
38-39	37%	21%	58%
39-40	36%	22%	58%
40-41	44%	14%	58%

While from 1937-41 the percent of inmates admitted below the age of 25 remained about the same, those below 21 years of age dropped 1% per year from 1937-40, and suddenly spurted 8% (to 44% of the total committed) during the past year. Therefore it may be concluded that while the number of prisoners sentenced to the institutions has remained rather constant, the age of the offenders has suddenly decreased; which inversely, means that juvenile delinquency is on the increase. A new challenge--a more difficult problem to the Department of Welfare.

Secondly, an analysis of the annual crime trend in Pennsylvania (refer to page) shows that for the past 3 years, fewer defendants charged with the crimes of murder, rape, assault, burglary, and larceny have appeared

before the trial courts of this Commonwealth. A recheck reveals that during the same period there has been a decrease in the total number of defendants, but not in direct proportion to the crimes mentioned, and the chart therefore shows a true picture. The difference is compensated by the increases in the charges for robbery, motor law violations, and non-support cases.

Since the intake to the State-owned penal institutions has remained constant, and in the previous paragraph it was mentioned that the number of defendants appearing before the trial court had declined, the resultant picture would be evident in the total county prison population (page). As would be surmised, the total population in the Prisons has declined from nearly 8000 in 1937, to 6114 in 1941. Significant, too, is the fact that the number of women in the County Prisons remains about the same year after year.

Reference has been made here only to three phases of many problems. To the jurists, penologists, writers, and others interested in the crime problems of this Commonwealth, other significant factors will be evident. It is hoped that their combined efforts in interpreting this and previous reports will assist in giving Pennsylvania an outstanding crime prevention program.

E. Arthur Sweeny

Secretary of Welfare

This Section of the Seventh Annual Statistical Report is comparable in contents to the material assembled in the previous report. Once again emphasis is placed on admissions during the year to the State Penitentiaries and Industrial Schools, the Correctional Schools, and the County Prisons, with one table on the inmates training provided in the prison industries.

In addition to the regular statistical tables, this copy contains a supplemental section on "The Parole Violator", written by Dr. John A. Cooper, of the Educational Department staff of the New Eastern State Penitentiary, Graterford.

This study of Dr. Cooper's is an initial attempt by the Division to incorporate in its reports a condensed summary of the material derived from the collection and compilation of statistics by the Division.

It is the sincere hope of the Department that graduate schools will see fit to assign to the Division for thesis study and development, students interested in sociology and criminology. The data collected since the creation of the Division of Research and Statistics in 1927, should be most valuable as a basis for many graduate papers.

LeRoy C. Schaeffer
Supervisor
Research and Statistics

PRISON LABOR DIVISION

The fundamental purpose or function of the Prison Labor Division, Department of Welfare is to rehabilitate and reclaim as a useful and industrious part of society, the largest possible percentage of the approximately 3,000 prisoners who are paroled or released yearly from Pennsylvania State Penal and Correctional Institutions. You will hear and read a great deal about the small percentage who return to crime but you will hear or read little or nothing about the large percentage who are rehabilitated and reclaimed when returned to their respective home communities.

During 1941 eighteen Prison Industries were operated by the Prison Labor Division at seven State Penal and Correctional Institutions. Nearly 2,000 prisoners were given at least part-time trade-training employment in one or more of these industries. They were first given an extensive technical apprenticeship training in the trade or trades they wished to learn. Then they were placed on production under skilled civilian instructors. The products they manufacture must meet the rigid requirements of State and Federal specifications.

Wages are paid to prisoners. "The rate of compensation is based upon the pecuniary value of the work performed and also on the willingness,industry and good conduct of the inmate". The daily wage ranges from 20¢ for apprentices to nearly a dollar for key workers of exceptional ability. Some workers are placed on piece-rate, others received bonuses for efficient work and faithful service. These systems offer a special inducement and incentive for quality production. Other operating costs include: industrial buildings, equipment, raw materials and civilian supervisors and instructors. Nevertheless this program must be operated so efficiently that it is maintained on a fully self-supporting basis. This is accomplished through the sale of products manufactured to tax-supported institutions and agencies of Pennsylvania. The sale of these products on the open market is prohibited by law.

Working conditions in all shops are patterned after those in outside industry. Well lighted and well ventilated shops with the most modern equipment, offer every possible inducement to prisoners to follow industrial pursuits. One needs but to inspect any of the Pennsylvania Prison Industries to realize the pride that prisoners take in the products they manufacture. Moreover one senses the curative value of good honest work and understands that such activities are of vital importance in any program of rehabilitation.

Outstanding advantages offered by this program include:

1. Through trade-training in industrious pursuits prisoners may be rehabilitated and reclaimed as a useful part of society.
2. Wages paid to prisoners may be used to support dependents on the outside or may be accumulated to aid the prisoner in getting a fresh start in life when he is released.
3. Prison Industries keep hands and minds of prisoners occupied thus preventing riots and prison disorders which come with enforced idleness.
4. The operating costs of tax-supported institutions and agencies may be lowered through the purchase of Prison Industry products.
5. The large percentage of prisoners who are reclaimed through this program and are not returned to prison, sharply reduces the operating costs of State Prisons.
6. The State may in an emergency transfer funds from the Prison Labor Division's Manufacturing to the General Fund in lieu of levying additional taxes.

F. Herbert Cooper
Acting Superintendent
Prison Labor Division

COMMONWEALTH OF PENNSYLVANIA

THE PAROLE VIOLATOR

DR. JOHN COOPER
Eastern State Penitentiary
Graterford, Pa.

1941

THE PAROLE VIOLATOR

The parole violator has been a constant problem and source of worry to the general public as well as to the penologist. In an attempt to discern the cause of these violations and to better understand the violator, an analysis has been made of all men violating their paroles who were originally received in the Eastern State Penitentiary (Pa.) since the inauguration of our classification program in October 1934. A previous summarization of our findings was made in February 1940. The present study terminated as of October 31, 1941; seven years after its inception and six years two months after the first of these men was released on parole.

Although the individual adjustment of each and every parolee would be extremely interesting and valuable, keeping in touch with all of these men is an impossibility. Therefore, the analytical phase of this study is necessarily confined to those men who have violated their paroles. However, prior to our study of these violators, a composite citation of the total number of men paroled; the number still under parole supervision; and the number who have completed their paroles and received final discharges makes an interesting picture. The following table* portrays the status of all individuals paroled from this institution; from the inauguration of Pennsylvania's parole system, in 1910, to October 31, 1941:

		Total
Released on Parole, Sept. 1910 to Oct. 31, 1941		14440

	11572	11572
Remaining on Parole, November 1, 1941		2868

In considering the 2940 violators, it is found that: 2108, or 72% committed new crimes; 800, or 27%, were Technical Violators (involving a breach of their

*From the monthly report of the Parole Department, for the month of October, 1941.

parole privileges, such as: failure to report; leaving the state without permission; excessive drinking; etc.); and the remaining 32, or 1%, voluntarily requested return to the institution, when conditions led them to feel certain that they would only violate their parole if they remained on the outside. In addition, 694 of the 2868 individuals considered on parole have been declared violators and await capture and return to the institution. Thirty-one years of cumulative records; and they show that only one out of every four individuals paroled is a violator! A surprisingly low percentage when we bring ourselves to admit the fact that, during at least the first twenty years of this period, parole supervision (in the average case) was far from conducive to successful readjustment in society.

In the seven year period covered by this study, the February 1940 and October 1941 figures give us the following comparative tables:

PAROLE STATUS

	February 1, 1940		October 31, 1941	
On Parole	944	59 %	1828	55½%
Final Discharge	457	28½%	1081	33 %
Violated	201	12½%	378	11½%
Totals	1602	100 %	3287	100 %

Although the number of cases involved definitely influences the statistical reliability of the results of any study, a comparison of the 1940 and 1941 results gives a rather definite picture of what might be expected in the future. The comparison also adds greatly to the reliability of the findings. A total of 3287 men had been paroled prior to October 31, 1941. Of this number 1828 men were still on parole; 1081 had successfully completed their paroles and received final discharges; and the remaining 378 men had been returned to the institution as parole violators. We find that one of these violators appears three times in the study, having violated parole on his current sentence on three separate oacasions; and six of the violators

are twice recorded. In actually, then, there were only 370 different individual violators. In all fairness to the study and to the men returned as violators, the fact should also be pointed out that not all of these 378 men violated their paroles by the commission of another crime. It was found that 68 of the group were returned as Technical Violators and 2 of the men were returned at their own request. Therefore, although it is necessary that these 70 men be included in all statistical analysis, it should be borne in mind that 18.5% of these 378 violators were not even charged with the commission of a new crime. In addition, though conviction in any court of record constitutes a parole violation, 33 of the violators (9%) were convicted of misdemeanors and not new felonies.

The general public has only a limited appreciation of the true meaning of parole and, unfortunately, practically the only picture they ever receive of it is the greatly dramatized newspaper articles of parole violations. How often (fortunately for the man involved) do we see an article concerning a man who is making good on his parole? Or, for that matter, an article giving us the general picture of the many men who are successfully completing their paroles. We find, for example, that only 11½% of all the men released on parole, from this institution, are violators; and, even when we add to this 11½% those who completed their parole and became involved in some crime after their period of parole had expired, only 26% are violators. From a direct comparison of the 1940 and 1941 statistics, we are led to believe that we can look forward to a decrease rather than an increase in the percentage of men violating their paroles, and as the public reaches a better understanding and more fully cooperates with the parole program, the percentage of violators should show a marked decrease.

A similar study, conducted by the New York State Division of Parole, also indicates that success on parole is on the increase in that State. The

New York State study comprised three groups of parolees, analyzing the adjustment of each group five years after release from prison. Of these released in 1934, 17.5% were returned to prison because they had committed new offenses - 9.4% convicted of felonies and 8.5% of misdemeanors; in the 1935 releases, the percentage returned was 15.6 - with 8.5% for felonies and 7.1% for misdemeanors; and the percentage returned, of the group paroled in 1936, was 14.7 - with 7.6% committing new felonies and 7.1% for misdemeanors. Of the remaining 85% of the 1936 parolees, 65% had made satisfactory adjustment and 20% were returned to prison by the Parole Board, either to complete their sentences or to better prepare themselves to meed their parole obligations. A tabulation of the five year record, of the 1936 parolees, is as follows:

	Number	Percentages
Felony Convictions.....	133	7.6
Misdemeanors.....	114	7.1
Ordered returned to Prison by Board for Parole Violation.....	327	20.4
Satisfactory Adjustment.....	1043	64.9
	1606	100.0

Returning to the present study, let us consider these 378 men who have violated their paroles. The length of time that these men remained on parole ranged from 10 hours to 40½ months; and their average length of time on parole was found to be 9.46 months. This is nearly one-half month longer than the 1940 average of 9 months.

It is interesting to note, as illustrated by the following tables, the relationship between the original crimes committed and those for which the men were returned as parole violators.

Crime	Original	Violations
Arson.....	3	1
Crimes of Theft.....	316	224
Crimes of Violence.....	32	40
Sex Crimes.....	19	8
Escape.....	5	2
Misdemeanors.....	3	33
Technical Violations....	0	70
	378	378

What type of criminal picture do these parole violators make? Can we look for them to commit a crime, in their violation, similar to that for which they were originally sentenced? The preceeding table shows a definite relationship between these two crimes; and, when we consider the fact that 103 of these men are not included in the felony tabulations in the violation column, an even closer relationship is noted. In addition, correlation of the men's original crimes with those they committed in violation, showed a rather high positive coefficient of .432 (P.E. $\pm$ .04). This leads to the conclusion that we can, in general, look for these men to commit the same type of crime in violation, as that for which they were originally sentenced.

It was found that 235, or 62%, of the violators were white and the remaining 143, or 38%, were negro. An explanation of this seemingly unbalanced 2 to 1 ratio, of white violators over negro, lies in the fact that the average population, of this institution, is comprised of approximately 65% white inmates and 35% negro.

The ages of these men range from 16 to 63 and the average age of the group was found to be 28 years. The fact that 176, or 47% of these violators were under 25 years of age; and 64, or 17% were less than 20 is of some significance. Our 1940 findings showed an average of 28 years; with 45% under 25 and 17% under 20.

The intelligence quotients of this group ranged from 42 to 133, with an average I.Q. of 81. Their educational achievement scores ranged from total illiteracy to above tenth grade, with an average showing of sixth grade. Their outside school attendance ranged from nothing to completion of college, with an average accomplishment of 6.3 grades of work.* It was discovered that 221, or 58%, of the men, had definite records of truancy and

*Surprisingly, in this age of compulsory education, it is found that 8% of all men entering this institution cannot read or write. One out of every twelve commitments is socially handicapped to that extent! It might be added, that a number of these illiterates are less than twenty years of age.

the remaining 157, or 41.5%, were not school truants. Finally, in our study of the educational factor, it was found that only 73, or 19%, of these parole violators, showed interest and spent any appreciable time in the institutional school; whereas 838, or 78%, of the 1081 men who completed their paroles and received final discharges, had definite achievement records in the institutional school. The figures revealed appreciable acheivement records for only 15% of the violators and 75% of the finally discharged group.

Another important phase of a study of this nature is the social history of these men. There were 230, or 61%, who were the products of homes broken by death, divorce or separation before they reached their sixteenth birthday. The two tables which follow, depicting the employment history and marital status of the group, are self-explanatory:

PREVIOUS EMPLOYMENT

	FEBRUARY 1940		OCTOBER 1941	
Labot	167	83 %	327	86½%
Semi-skilled Labor	6	3 %	13	3½%
Skilled Labor	19	9½%	26	7 %
Clerical	3	1½%	4	1 %
Professional	5	2½%	7	2 %
No employment record	1	½%	1	-
	201	100 %	378	100 %

MARITAL STATUS

	FEBRUARY 1940		OCTOBER 1941	
Married	54	27 %	91	24 %
Widower	2	1 %	7	2 %
Divorced	5	2½%	15	4 %
Separated	23	11½%	39	10 %
Single	117	58 %	226	60 %
	201	100 %	378	100 %

CONCLUSIONS

1. The fact that only one parolee out of every four violates his parole is

of definite significance. The public, as well as the majority of penologist and parole administrators, thinks and speaks in terms of a much larger percentage. Few would have predicted this small number of violators.

2. It may be assumed that there will be a constant decrease in the percentage of men violating their paroles. The New York State study portrayed this continued decrease even more vividly than the present one. The validity of this conclusion is substantiated by the facts that: (a) the studies were conducted in different states; (b) the New York State parolees were selected from those with less serious criminal records, while this study comprised all parolees; (c) both studies involved continuous parole histories over a period of years.

3. The wide variance in the time element during which the violators are able to meet parole regulations does not permit us to forecast when the violations are most likely to occur. However, the increase in the average length of time successfully on parole, permits us to look forward to an increased period for rehabilitative efforts.

4. There is a definite relationship between the violator's original crime and the crime committed in violation of his parole. This finding should prove of some value to parole administrators and supervisors.

5. There is no indication that either the white or negro predominate in their success on parole or their violation.

6. The public and parole supervisors should manifest a more pronounced interest in abetting the adjustment of younger parolees, since it was found that approximately 50% of the violators were less than 25 years of age.

7. The educational background of the men has been shown to be contributing to their success or failure on parole. Of outstanding significance is

the fact that the man's interest in self-improvement, while in the institution, has a definite bearing on his parole success.

8. The stability or instability of family background is playing a major role in the parolees adjustment on the outside.

9. A pronounced lack of vocational training has already been established as contributory to crime and parole violation. This study emphasizes the importance of this factor, with seven-eighths of the violators never having risen above the employment level of common labor.

10. The discovery that three-fifths of the men violating their paroles are single leads to the conclusion that being married and having a family is a stabilizing influence, and promotes successful compliance with parole obligations.

BUREAU OF CORRECTIONS

The Bureau of Corrections, that factor of the Welfare Department which inspects, supervises and regulates the Penal and Correctional Institutions of the Commonwealth of Pennsylvania, herewith submits data and statistics gathered from all prisons throughout the State.

This Bureau, formerly the Bureau of Restoration, is governed by laws and Acts of Legislature and an Administrative Code, and the primary duties are to inspect and regulate all institutions in the Penal group and to establish standards for physical maintenance in these institutions whereby persons who are so unfortunate as to be held in their confines receive just, humane and considerate treatment.

There was a time when prisons were places of detention for the safe-keeping of law breakers, and one rule held fast for all. But time goes on and progress is made in all walks of life. This is not untrue of prisons. Now much time, thought and treatment, study and expenditure are made in the care of the individual offender.

Special classification of each offender is made; special treatment is afforded when needed; school and trades are offered where an aptitude for such is manifested; hospitalization and surgery to correct illness which may have been the basis for crime is available; psychiatrists analyze those offenders who require mental adjustment;special interviews by representatives of the Welfare Department give the offender the sense of having his welfare taken care of by an unbiased third party. In all, the offender is being rehabilitated for the time when he returns to society, (having paid his debt), with a greater chance of returning to normal living and becoming a useful citizen.

The charts and tables presented herein are clear, definite pictures of problems of the offender, the administration of the institutions, and the Commonwealth.

Space which limits detailed explanations, will allow for a few major comparisons:

Commitments to the Eastern State Penitentiary for the year ending May 31, 1941 were 841 against 867 for the year ending May 31, 1940.

Commitments to the Western State Penitentiary for the year ended May 31, 1941 were 391 against 451 commitments for the year ended May 31, 1940.

Commitments to the Pennsylvania Industrial School at Huntingdon for the period ended May 31, 1941 were 975 against 887 for the year ended May 31, 1940.

Pennsylvania Industrial School at Camp Hill received 38 commitments to May 31, 1941. This small population is due to the fact that the school was recently opened by the Commonwealth of Pennsylvania.

The State Industrial Home for Women, Muncy, had 129 commitments for the year ended May 31, 1941 against 141 for the year ended May 31, 1940.

Total new commitments for the year ended May 31, 1941 were 44 more than the previous year.

Commitments to State Penal Institutions were fewer, which is indicative that felonies and major offenses were less, while in the Correctional and Training Schools, commitments are slightly higher, showing that delinquency among adolescents is still a problem to be solved.

The upward trend in employment may have been one factor toward this decrease in commitments. Then, too, the many branches functioning within the Criminal Justice Program may have materially reduced the number of commitments.

It is worthwhile to note that the majority of commitments were under the age of 21 years. For the period ended May 31, 1941, there were 1047 commitments against 830 for 1940. The majority of these commitments were to Correctional and Training Schools requiring minimum security for minor

offenses,while the commitments to maximum security prisons for major offenses were larger in persons between the ages of 21 and 29. The highest number of commitments to the State Penal and Correctional Institutions were for robbery, burglary, larceny, constituting 1329 of the entire total number of commitments.

Probably the greatest satisfaction to the prison executive and society is the fact that the commitments on sex crimes were reduced during the year ended May 31, 1941. This is one problem with which scientific research, psychiatrists, and rehabilitative supervisors have been unable to cope.

The marital status of the commitments to State Penal and Correctional Institutions for the period ended May 31, 1941 is divided as follows: 376 married, 1637 single. This is due largely to the number of youthful offenders committed to the Correctional and Training Schools.

Of the 2374 commitments, only 789 were first convictions. This points to the fact that more than two-thirds of the number committed were recidivists. Rather interesting, too, is the fact that 1358 commitments were of persons on relief and unemployed.

It is believed that the present economic condition of this country, coupled with the war and defense program, will reduce crime to a minimum because idleness and unemployment, two of the factors contributing to crime, will be at a probably all time low.

Of the 329 boys and girls between the ages of 9 and 21 committed to the Pennsylvania Training School, Morganza, during the year ended December 31, 1940, 145 cases were from homes where the parents were living together; 184 were from homes broken because of death, separation, divorce, etc. These figures prove a definite lack of home discipline, training and parental supervision.

Commitments to County Prisons average about 90% of the commitments in the Commonwealth of Pennsylvania. While the offenses very often carry short sentences, many long sentences are served in County Prisons. The average daily population for the year ended December 31, 1940 was 7283.

38,180 criminal cases were disposed of by the Courts for the year ended December 31, 1940; 26,716 were convicted, 11,464 were dismissed.

Many transfers from Penal Institutions to County Prisons have been completed during the year. The penitentiaries have been over-populated, and an amicable arrangement between the institution, the county authorities and the Department of Welfare, has alleviated the over-crowding and materially assisted County Prison industry, especially in the eastern part of the State. It has also endeavored to transfer an idle prisoner from one institution to another and provide him with employment whenever possible.

Institutions inspected and supervised by the Bureau of Corrections are as follows:

Eastern State Penitentiary, Philadelphia; New Eastern State Penitentiary, Graterford; Western State Penitentiary, Pittsburgh; New Western State Penitentiary, Bellefonte; State Industrial Home for Women, Muncy; Pennsylvania Industrial School, Huntingdon; Pennsylvania Industrial School, Camp Hill;Pennsylvania Training School, Morganza; Allegheny County Workhouse, Blawnox; House of Correction, Philadelphia; and 68 County Prisons, (including the Holmesburg and Moyamensing Branches of the Philadelphia County Prison), and the Broadmeadows Prison Farm, (a branch of the Delaware County Prison).

In addition to these institutions, 668 City, Borough, and Township lock-ups come under the supervision of the Bureau of Corrections. This last group has been reduced to 514 because certain standards of sanitation and physical maintenance for the custody of inmates have not been met. Many of the smaller municipalities have chosen to use a neighboring approved lock-up, or the County Prison, rather than make extensive repairs; and have closed

their places of detention, thereby creating a financial saving to taxpayers.

It is thought the most significant facts have been brought out in this prelude to statistics, charts, and graphs prepared by the Division of Research and Statistics. However, it is not our intention to have covered all of the material set forth, and many more like comparisons could be made.

Bureau of Corrections

COMMONWEALTH OF PENNSYLVANIA

SEVENTH ANNUAL STATISTICAL REPORT

of the

Department of Welfare

E. ARTHUR SWEENY
Secretary

1941

Bulletin No. 84 General Section C

-10

In its administration of 37 institutions, each of which must be operated with moneys appropriated by the General Assembly from the general fund of the Commonwealth, the Department of Welfare must have accurate statistical information at all times. This information is necessary for the Department's guidance in reaching decisions on operation costs, budget allotments, etc. Population trends and personnel turnovers are compelling factors in all of the Department's work.

Proper evaluation of all of the services of the Department, both departmental and institutional, can be had only by constant consideration of statistics.

This bulletin presents a picture for 1941 which is invaluable in planning our operations and being able intelligently to present the departmental and institutional needs of the Department of Welfare to the General Assembly.

Not only to those who are charged with institutional problems, but to the taxpayers of Pennsylvania as well, we commend this bulletin.

E. Arthur Sweeny
Secretary
Department of Welfare

The summary of service data of the Department of Welfare is included in this, the C Section of the Seventh Annual Statistical Report. The statistical information on the mentally ill and mentally deficient and epileptic is printed in Section A, and the material on the prisoners in State and county institutions, as well as the correctional schools is assembled in Section B.

In addition to the service data, information on the Child Caring, Maternity, and Day Nursery institutions is shown. And figures on the county home guests, Causes of Blindness in Pennsylvania, Analysis of Costs in State-aided Hospitals, and the Statement of Costs of Operating State-owned institutions, are also included.

This Section, we feel, will be helpful to those directly or indirectly interested in the services performed by the Department, to those interested in the costs of operation of the institutions.

WHERE THE WELFARE DOLLARS GO

BUREAU OF INSTITUTIONAL MANAGEMENT

The Bureau of Institutional Management is responsible to the Commonwealth and thirty-one State-owned institutions for developing and supervising a program providing food, clothing,laundry, light, water, heat, farm products and general maintenance. Standards for goals of performance are promoted. Key employees are called together for conferences on important problems. Monthly summaries of data reflecting efficiency of the food, laundry, hospital, farm, and engineering service records are issued to all institutions.

Dietary

Tables I and II show the ration or the daily per capita food requirements which have been estimated for the different types of institutions. This ration has been based on the essentials of a low cost adequate diet. It is used as a yardstick in judging the adequacy of the institutional food consumption. It is also used as a guide in planning the production of the institutional farms and in the purchase of perishable foods to supplement such production, as well as in the purchase of staple food stuffs.

The variation as to the performance of the different institutions is attributed to factors such as weather and soil conditions; physical conditions within the institutions such as canning, storage and preparation facilities, and number of personnel; as well as psychological and budgetary factors. Quality, variety and economy are stressed and every attempt is made to insure adequate food consumption and satisfaction for both patients and personnel. The waste figure denotes plate waste and not preparation waste.

The personnel with the dietary departments is headed in most institutions by a trained and experienced dietitian. The ratio of personnel to that of meals served varies considerably. A ratio of 1 dietitian to

every 750 people served would probably meet most of the acute needs. The ratio of 1 dietary employee to every 60 people served is probably fairly satisfactory where patients are available in the various dietary functions. A centralized food preparation and service department usually requires less personnel than where a large number of preparation and service units are maintained. Frequently other departments, such as nursing, overlap in the responsibility of the food service, thereby reflecting a lower number of personnel in the dietary department. There is always some overlapping in this function but it is usually considered better organization to charge an employee who is actively engaged in dietary duties to the dietary department rather than to another department.

Table IV indicates the trend in prices of certain type foods for a period of five years. The figures given were obtained from the prices submitted from nineteen institutions including mental hospitals, schools for mental defectives, and penal institutions. The prices for the month of December, 1941, were inserted since drastic increases had occurred in many commodities during the year 1941. The greatest increase in any one particular food was probably in the case of cheese. Eggs also show a drastic increase in price but part of this increase is due to the seasonal nature of eggs. The price of milk has remained stationary since this item is largely produced on the institutional farms and to date there has been no fluctuation in this price. The prices of potatoes, cabbage and carrots are also those charged by the institutional farms.

Table III indicates the per capita food costs for a period of nine months at the medical and surgical hospitals. The fact that it is based on patient population rather than total number of meals fed, should be kept in mind. Practically all of the hospitals supply their employees and nurses with meals. The presence of a School of Nursing and the physical characteristics of the buildings contribute greatly to the differences in

the ratio of dietary personnel in this group of hospitals.

Farms

Institutional farms are maintained in connection with eighteen institutions. A total of more than 26,000 acres is included in these farms, about 12,000 acres of which are tilled. The returns to the institutions include, in order of importance, protection, wholesome work opportunity, and a better quality of food at less cost than could be purchased from budgets available.

Table V shows the acreage, total and tilled, at each institution. A definite plan obtains for each acre. This plan is based on the policy that the following products, in order, should be produced as needed to the extent that land and other facilities are available: vegetables, potatoes, crops to support dairy, piggery, hennery and other livestock. After such tilled crops are provided for, the remaining acreage is planned and maintained for pastures and woodlots.

Employment of patients or inmates is also shown. A total of 1697 persons are employed regularly in farm activities, with the larger proportion working with general farm crops and in gardens. This number is greatly increased at times during the Summer and Fall seasons when vegetables , potatoes or fruits are being harvested. The varied opportunity thus presented to the medical staff at the several institutions in placing mental patients is considered of great value. A comparable value toward rehabilitation is obtained at the penal and correctional institutions. At Rockview alone, upwards of 300 prisoners are employed in farm activities regularly.

Table VI shows the milk production per cow, egg production per hen, and the crop index for 1929 as compared with 1941. It will be noted that the efficiency of production per cow is one-third higher in 1941 than in 1929. This makes possible a very considerable economy in production because one-third more milk is being produced with the same number of cows

and therefore with no greater building space involved or the cost of maintaining added individual animals. The 9,000,000 pounds more milk makes possible a much better diet at a considerable saving over that of purchased milk. The saving alone would be estimated at $125,000 per year.

A similar economy is represented in the 75% increase in eggs produced per hen in 1941 as compared with 1929. Even though the number of eggs has more than trebled, very few institutions as yet produce a half egg per day capita, which is recognized as the minimum goal.

The crop index figure as indicated reflects a comparison between institutional yields of farm crops and those of individual farms in the same counties. It is gratifying to note that from 1929 to 1941 institutional crop yields trended upward--from 12% above the average for private farms to 55%. The goal set in 1928 was 50% increase over average farm yields.

In Table VII the acreage and total yields are given for corn, ensilage, oats, wheat, hay, barley and potatoes. Yields vary greatly, which is not unusual due to the varied climatic conditions in Pennsylvania. During almost every season drought is likely to occur in one portion of the State or another. During the same season rather ideal crop conditions may exist in other sections. Since 1929 the acreage in oats and wheat has tended to diminish somewhat, while an increase is shown for hay, ensilage and potatoes.

It will be noted in Table VIII that at the penal and correctional institutions one paid employee only is listed for the livestock and garden activities. One employee only is responsible at the piggery and hennery, respectively, in connection with the mental institutions. In this latter group, however, a number of paid employees are necessary for the farm, dairy, and truck garden activities. This is true because of the use of mental

patients. While it is highly advantageous to give a patient an opportunity for wholesome exercise and work, their use entails a considerable responsibility which can be met only by trained employees. Population, tilled land, and number of livestock, are some of the factors deciding the number of paid employees on farm crops and livestock activities. Cost per capita per day includes salaries, seed, feed--in fact all items charged to the several activities.

Laundry Table IX compares the average results of the first five test bundles with those of the 22nd bundle. The last one was of four test bundles checking quality of work done in institutional laundries during the fiscal year ended May 31, 1941. It will be noted that the reports record the percentage of breaking strength loss,retention of white color, and soil removal. Marked improvement is evident in all three factors. Service and information secured through a connection with the Ellen H. Richards Institute of the Pennsylvania State College are important factors in developing and maintaining the improvement indicated. The service mentioned is shared with State-owned institutions operating under the Departments of Public Instruction, Health, and Military Affairs.

In Table X laundry data is shown relative to the volume of soiled goods, employees--patient and others--and costs per pound. The rather formidable total poundage of soiled goods amounts to over 35,000,000 pounds for the year. More than 60% of this total passes through the laundries of the mental hospitals. The highest per capita is, of course, found in the medical and surgical hospitals. By groups as to per capita load the other institutions range in the following order: mental hospitals, feeble-minded and epileptic, and penal and correctional institutions.

The per capita poundage of soiled goods for the different groups of institutions reflects the type of patients and inmates, as well as the

care required for the varying groups. The figure is lowest for those in the penal and correctional institutions and highest for the medical and surgical hospitals.

Work opportunity is found in the penal and correction, mental, and feeble-minded and epileptic institutions for a total of 1173 inmates and patients. Institutional administrators welcome varied opportunity for employment. Efficiency is usually not a characteristic of such employees, if they can be termed such, but due to a rehabilitative or therapeutic program which exhausts all opportunities for wholesome work, and to restricted budgets preventing a full quota of paid employees, the work accomplished by inmates and patients is important.

Washing costs include all soaps and detergents, while gross costs include this group and in addition repairs, salaries, and other items. While the gross cost at mental and surgical hospitals is slightly over 1¢ per pound the average for all institutions is less than 1/2¢ per pound.

Engineering

The engineering activities cover the various utilities used in conjunction with the operation of the 30 institutions and the maintenance problems that affect the continuity of each of the utilities together with the care of the physical property. Table XI covers the annual costs for the purchase of the basic maintenance materials and utilities. The purchase of coal is the largest single item. The purchase of electricity represents approximately 40% of the electricity that is actually used at the State institutions, while the purchase of water represents approximately 1/6 of the water that is used at the institutions. During the past year additional utility loads have been placed upon the institutions due to the fact that buildings that were constructed under the General State Authority program have now been put in use. This, together with the additional population,

justifies the increase in the amount of utilities consumed.

Hospital Service

Table XII shows an analysis of hospital service at ten State-owned medical and surgical hospitals. When making a comparison between this year and the previous one it is found in the analysis of hospital service that the number of admissions and discharges has considerably increased, showing a more rapid turnover of patients and greater activity in the medical and surgical hospitals. The number of discharges shown is more than 1500 above the figure for the previous year. The laboratory work in these hospitals has substantially increased, which is in keeping with advanced medical science. More clinics are being set up and the attendance at the various clinics is steadily rising. It will be noted that 22 clinics are in operation. At the Philipsburg State Hospital there are 7 clinics and at the Nanticoke State Hospital there are 5 clinics. This service offers an opportunity for those in need to maintain higher health standards.

A study of care for the 23,000 patients in nine State-owned mental hospitals shows much yet to be accomplished through nursing service. The 6300 patients in institutions for mentally deficient and epileptic are a close second in similar demand. Ten medical and surgical hospitals operated under the Department are comparable to other general hospitals throughout the Commonwealth.

The General State Authority has completed a construction and equipment program providing much needed hospital buildings and related facilities for the Eastern State Penitentiary at Graterford, the Western State Penitentiary at Pittsburgh, the Pennsylvania Training School at Morganza, and the New Pennsylvania Industrial School near Camp Hill. Hospital buildings at each of these institutions have been occupied. This is in addition to added facilities at mental institutions and medical and surgical

hospitals. The Western State Psychiatric Hospital is practically completed but not yet occupied.

Tables XIII (a), (b), and (c) relate to the educational program for nurses and attendants in State-owned institutions. Schools of nursing are maintained at 4 medical and surgical hospitals--Ashland, Hazleton, Philipsburg and Scranton--and at the Danville State Mental Hospital. It will be noted that three year courses are provided and that 94 and 96 students, respectively, completed courses in 1940 and 1941. The men students at the Danville State Hospital received general hospital training through an affiliation with Scranton State Hospital. A similar affiliation exists with the Philadelphia General Hospital, Philadelphia, for the women students.

Three months psychiatric nursing affiliation is given at the Allentown and Warren State Hospitals as shown in Table (b). Totals of 251 and 268 students completed such courses respectively in the years anded May 31, 1940 and 1941.

Table (c) refers to schools for licensed attendants located at Harrisburg and Wernersville. These completing such courses in 1940 and 1941 numbered 30 and 53 respectively. The substantial increase in the number of students at the Harrisburg State Hospital in 1941 was the result of two courses being given during that year.

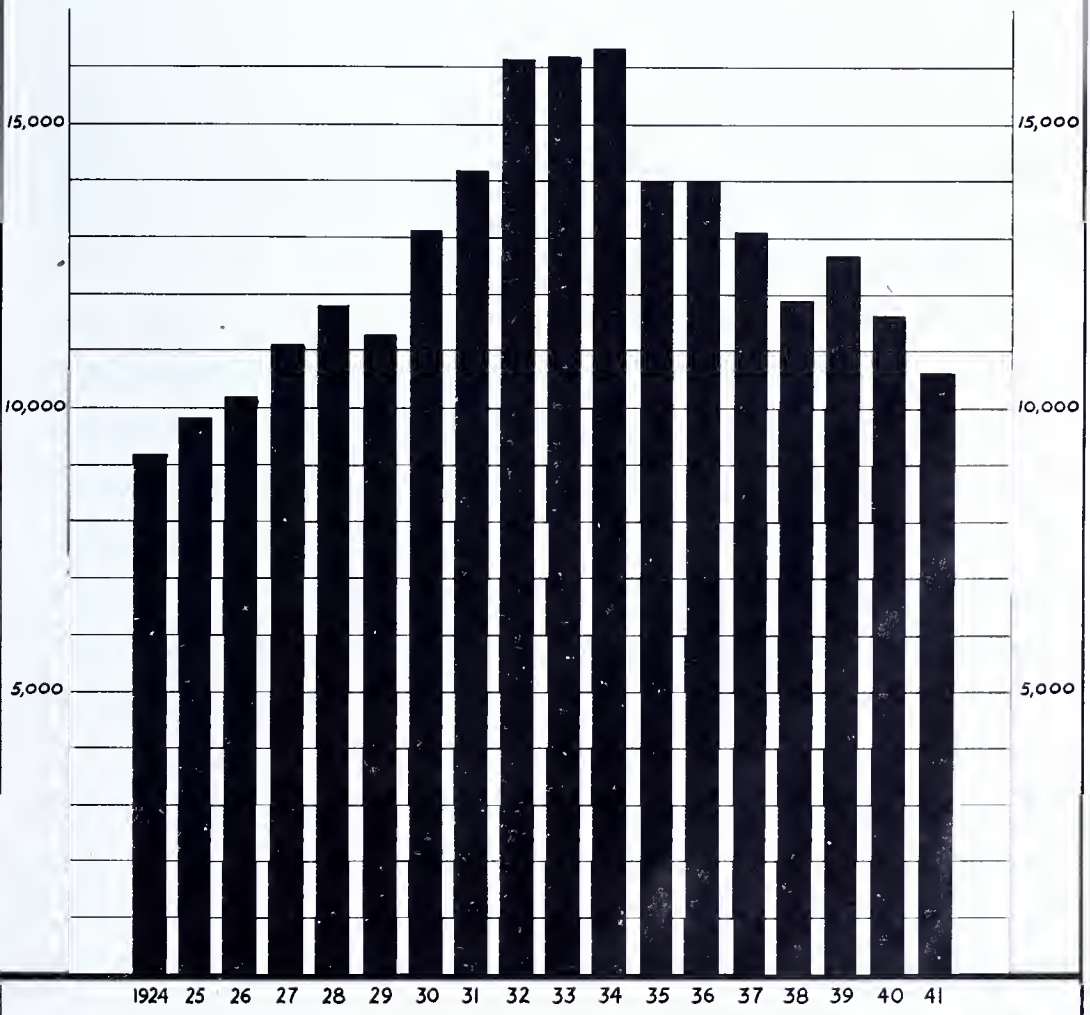
COUNTY HOMES

Population – December 31

1924 - 1941



BUREAU OF COMMUNITY WORK

Children's Census

Since 1924 the Department of Welfare has conducted an annual census of children who are under the direct care or supervision of the child-caring institutions and agencies which are supervised by the Bureau of Community Work, in accordance with the provisions of the Administrative Code of the Commonwealth. This census is conducted by the Division of Research and Statistics of the Department, in cooperation with the Bureau of Community Work.

For the last four years, the Council of Social Agencies in Philadelphia and the Federation of Social Agencies in Pittsburgh have cooperated closely with the Department of Welfare by collecting data from the agencies and institutions in their respective cities.

Their help has been greatly appreciated.

The statistical tables number XIV to XIX give the results of the census for the year ending December 31, 1940. In contrast to the census of 1939 in which 330 separate agencies and institutions reported, it will be seen that only 313 agencies and institutions reported during this year. These figures do not include the Juvenile Court.

Agencies and Institutions Reporting - The following brief analysis of the differences in number of agencies and institutions reporting in both 1939 and 1940 may be helpful.

Child-Caring Agencies - In 1939, sixty reported, while fifty-seven reported during 1940, three failing to report.

Institutions for Dependent Children - In 1939, one hundred and forty-seven reported. In 1940, one hundred and forty reported. The drop of seven is due to the fact that six failed to report and one has closed.

The number of Institutions for Delinquent Children is 19. Three

institutions failed to report for 1940.

Institutions for the Physically Handicapped report numbered eleven for 1939. Nine reported for 1940, two failing to report.

Day Nurseries - Thirty reported for 1939, while only 29 reported during 1940. The one maternity home which failed to report for 1939 reported for 1940 making a total of 16; an increase of one.

Miscellaneous Agencies: One institution did not report, reducing the number of these agencies by one for the year of 1940.

Children Involved - The 313 organizations reported a total of 40,755 children, (including children and young people under 21 years of age) in care at the end of the year. Based on the experiences of 1938 when individual reports of agencies and institutions were checked against each other to eliminate duplication, and a duplication of slightly over 9% was found we have taken 9% of the total of 40,755 or 3667 children, and estimated this number as having been counted more than once, leaving 37,088 individual children in care of the 313 organizations on December 31, 1940. Of these children 7855 were under supervision in their own homes, and 1368 in daytime care of day nurseries, leaving 35,720 children under care entirely away from their own homes. Since a number of County Institution Districts and their institutions and agencies failed to report, this total of individual children under care of institutions and agencies in Pennsylvania would be increased if we had those figures.

County Homes Population

Figures given in Tables XX to XXV relate to homes which also come under the supervision of the Bureau of Community Work in the Department of Welfare. Figures in these tables are tabulated from individual records submitted by County Institution Districts and include approximately 98% of the total county home population. Various kinds of social data contained in the

individual record cards are presented in the tables.

Table XX relates to the cause of admission to county homes . It will be observed that the reason for admission given in 2700 cases was old age and of this number 1752 were listed as 70 years of age or above. It may be assumed that these persons are in need of institutional care or were for some reason unable to adjust outside of the institution, and thus were not eligible for old age assistance. 1582 are listed as unable to find employment. It is interesting to note that the largest number in this classification, 1018, fall between 50 to 70 years age group. There were also in this classification 84 persons between the age of 21 and 40 and 136 between the age of 40 and 50 years. The question, how many of this group admitted to county homes because they were "unable to find employment" might qualify for public assistance would be answered only by means of a case by case analysis. The same is true of 2025 records as admitted for "other causes". For the most part other reasons for admission given appear to come within the definition of a "dependent" (person who is in need of public care because of mental or physical informity) who under the County Institution District Act are the legal responsibility of the commissioners acting as authorities of the County Institution Districts.

COUNCIL FOR THE BLIND

The law creating the State Council for the Blind places upon it the responsibility for maintaining a Register of blind persons in the Commonwealth. Today, the Council's register of the blind contains data of 18,483 persons who are blind within the generally accepted definition of blindness, a visual acuity of 20/200 or less in the better eye. This number is a portion of 1 to every 535 of the State's population, but there is a wide variation among the counties.

A study to determine the causes of blindness has been made and a table is given showing the results of this study. It can be noted that a large percentage of our blind population are blind from remedial or preventive causes.

To develop proper facilities to control blindness from these causes is a present objective of the Council and, at this writing, there is legislation pending, which if passed, will expand the Council's duties so that it will be able "to furnish or make available medical treatment, surgical operations, eye glasses and other necessary aids or services, including transportation, to needy blind persons or persons with impaired vision for the purpose of improving or restoring their vision. These services and aids shall not be furnished unless they are otherwise unavailable, and in no case shall the total cost thereof exceed $100 per person.

The table showing figures on the operation of vending stands by blind or partially seeing persons is the result of a cooperative program with the Division of Vocational Rehabilitation of the Office of Education, Department of the Interior, Washington, D. C.,under the provisions of the Randolph-Sheppard Act, passed by the Congress in 1936. These figures indicate the possibilities of employment for visually handicapped persons and show, in some measure, the results of the program in terms of income to those blind men and women to whom the Council has been able to extend its services with

its present staff and limited budget.

A project developed under the Work Projects Administration has made Talking Book Machines available, on a loan basis, to "needy blind persons". The Council, designated as the distributing agency by the Federal Government, has been assigned over two thousand of these machines and a table herein shows their distribution in the State according to Counties.

Gayle Burlingame, Chief

State Council for the Blind

TABLE XXIX

ETIOLOGIC FACTORS CONTRIBUTING TO BLINDNESS
YEAR ENDED DECEMBER 31, 1940

	No. of Ey Eyes
Infectious diseases	
Diphtheria	16
Gonorrhea	41
